ABOUT ME

My main technology stack:

React, React Native, Redux, less or Scss.

At the moment, I'm working on an amazing business project that has a huge and interesting functionality.

I consider CSS, JS, PHP, SQL to be the strengths of my skills.

I consider it my life's credo not to stop there. Having studied front-end technologies, I slowly began to learn back-end languages.

Also I learn from my colleagues and apply common rules and patterns when creating features.

A high level of soft skills allows me to quickly join any team and organize my work.

I have a great sense of humor and this helps to relieve work stress from colleagues, or easily resolving any conflict situations.
